

# Welcome Letter Flyify ATC

Welcome to the Flyify Flight Simulation Community. If you are reading this letter than you have elected to train to become a Flyify Air Traffic Controller. The Air Traffic process within the Flyify community is aimed to be a simulation of real-life controller to pilot communications. Training to be an Air Traffic Controller within the Flyify Community is quite simple. If you are reading this than you are ready to complete the first steps in becoming a controller by submitting the application. After review of your application the Air Traffic Control Training Administrator will gauge where to start your training. Our primary ATC trainer is Nick. He is a VATSIM certified controller and has been controlling on flight simulators for 3 years. The next step in your training is to setup a training session with Nick to earn your rating. You can do this by sending a text message to 772-249-9905 with your: Name, and desired training date, time, and level of understanding (basic, intermediate, advanced) or send Nick a PM on Discord with the same information. We appreciate your interest in controlling for Flyify.

Can't wait to see you in the tower!

Sincerely, Nick ATC Training Administrator
